Whitepaper

Version 1.3

## **Christian Chryptocurrency Coin (CCC)**

We're based in the United States, but when people need help in other countries they sometimes can't wait for three days. Also, the rise of digital currencies has seen a growing number of organizations invest in their own Bitcoin versions. The wave has reached religious organizations as they are now embracing virtual currency along with blockchain technology. The virtual currency technology provides an alternative means for congregants to contribute to their respective affiliations while connected on a global scale. This whitepaper highlights challenges that can be solved by digital currencies in church and introduces the Christian Cryptocurrency Coin (CCC).

One of the critical challenges affecting churches in the modern world is documentation of records, particularly for contributions made in cashless forms. Besides, most churches only offer contribution channels for banked members of the church. This means unbanked members have limited avenues for submitting their offerings. The fluxTrends asserts that a significant number of youths are not contributing to church programs to their maximum potential because churches still rely on traditional forms of payment to raise funds. Conventional modes of raising funds are limited to specific geographic locations. This denies people from distant regions potentiality of uniting with other congregants to support a common global course.

Virtual currencies provide a convenient approach for receiving and documenting church transactions. Catholic churches have been using the technology to collect and document payments. Digital currencies offer alternative contribution avenues for unbanked congregants. Various churches have implemented cryptocurrencies to enable unbanked members to submit

their contributions conveniently. Youths are often attracted to technology; availing digital currency payment can substantially upsurge the number of young people willing to contribute. Lastly, cryptocurrencies are accessible across the globe at all times. Christians from any region of the world can conveniently contribute to global life-changing initiatives from their mobile devices.

Christian Cryptocurrency Coin (CCC) is a new Christian cryptocurrency listed on XLM blockchain as a religious token. It does not hold monetary value, and it is non-profitable. Revenues generated from the token will be used in spiritual ways like charity – the first and only drop will be for relief purposes. The platform is accessible to Christian communities across the globe and offers unparalleled transaction speeds to its users. Besides, all user records can be accessed from the platform at any time. We invite all Christians to our platform to help us put a smile on vulnerable societies across the globe. Please take action today and visit our website <https://christiancryptocurrency.tech>. Together we can make the world a better place.

There will only be 10,000,000 CCCs ever in circulation.

Approximately JUNE 1, 2020

Version 1.3 Update SEPTEMBER 14th and we have been working with Stellarport to get KNOWN status, but Stellarport's delays and the rise and fall of XLM in value has dramatically change our initial drop price, which will hopefully give up enough to do what we sought out to

do with the 1st drop. The initial release of the full 10,000,000 CCC on the initial drop, we are going to drop completely in different amounts.

The delay in KNOWN status will not let us meet the needs of a Christian Congregation in the Philippines by sending them aid, so we are dropping the initial coin to get the coin in circulation. Future endeavors will be listed on our website to inform the market of our good works. 100,000 CCC will be sent to a Minister that is helping with the coin, because we are letting everything out in a single drop.
